

# Sexually Transmitted Infections in Bermuda

Data through year ended 31 December 2015

This report contains surveillance data received by the Epidemiology and Surveillance Unit from 1 January 2011 through 31 January 2016. It is recognized that there is undiagnosed and/or unreported infection in Bermuda and so it should be noted that this report can only provide information on the *diagnosed and reported* cases. However, the data can still provide important insights to the scope, distribution and trends in STIs in Bermuda.

The data has been aggregated by gender (male or female) and age-group. Age-groups are based on the person's age at the time of diagnosis. Totals may include persons reported with unknown age or gender. All data used in the preparation of this report is confidential. It is intended to be used for educational purposes and to direct and evaluate preventive and other STI-related services.

## ***Department of Health STI Services***

1. Sexual health information through health education/promotion, reports, etc.
2. Confidential STI and HIV testing with pre- and post-test counseling available
3. Treatment for persons with STIs
4. Epidemiological investigation of outbreaks and contact tracing
