

THE BERMUDA JOB MARKET *Employment Briefs*

Introduction

The 2015 edition of the Bermuda Job Market Employment Briefs is based on data collected from the 2014 Employment Survey. The Annual Employment Survey is a census of all businesses on the island and the Employment Briefs is used to illustrate and highlight the main findings of the survey. The purpose of the Employment Survey is to provide a broad count of all jobs in the Bermuda labour market by selected demographics, industrial and occupational groups. The information collected from the Employment Survey is the primary source used for analyzing employment trends in Bermuda and is disseminated as an objective source of employment information for use by government, commerce and the general public. This edition examines the employment changes between the years 2013 and 2014. Additional and more detailed information on Bermuda’s labour market can be obtained from the 2014 Employment Survey Tabulation Set. The 2015 Employment Briefs and the Tabulation Set are available on the Department’s website at www.statistics.gov.bm or <http://subportal.gov.bm/business-statistics/employment-statistics>. The reference week for the 2014 Employment Survey was 31 August to 6 September 2014.

2014 Highlights

- Total filled jobs fell to 33,475
- Total filled jobs by Bermudians fell 3%
- Financial Intermediation sector jobs decreased by 12%
- International Business activity sector jobs increased by 4%
- The median gross annual income for all job holders rose 5%

Aggregate Employment

The Bermuda job market continued its downward trend in 2014 as total filled jobs fell by 802 or 2%. There were 34,277 jobs counted in 2013 compared with 33,475 in 2014 (See Table 1). The breakdown of filled jobs by sex shows females accounted for 443 fewer positions in 2014 while males represented 359 of the total decline. The number of Bermudian job holders fell from 24,504 in 2013 to 23,833 in 2014, a loss of 671 jobs. The number of jobs held by other non-Bermudians (excludes non-Bermudian spouses of Bermudians and Permanent Resident Certificate (PRC) Holders) declined by 122 between 2013 and 2014. Among non-Bermudian Spouses of Bermudians there were 13 fewer positions in 2014, while PRC holders increased by four jobs.

The financial intermediation industry reported the largest decline in filled jobs, measuring 306 jobs. The loss of finance and senior clerks was accredited mainly to the year-over-year decline in positions for this sector. The international business sector grew in 2014, increasing by 169 filled jobs to 3,937 from 3,768 in 2013. This growth was attributed partially to increases in positions such as actuaries and underwriters.

Occupational Job Losses Continue

The Bermuda job market continued to struggle in 2014. The job market reported significant weakness with net job losses in eight of the ten major occupational groups. Table 1 shows that between 2013 and 2014 there was a sizeable decline in job levels in professional, clerical and craft and related trade occupational groups. Combined losses in these groups totaled 618 which accounted for 77 per cent of all job losses in 2014 (-802). In contrast, the number of technicians and associate professionals rose with 65 additional positions.

Jobs within clerical occupations fell by 336 in 2014. This occupational group reported the highest reduction in total filled jobs. The majority of the losses in this occupational group were senior clerks (-67), financial clerks (-62) and executive secretaries (-59).

Professional occupations contracted by (-143) positions from the previous year. Within this occupational group, certified accountants posted the largest decline in jobs at 54 and computer professionals declined by 45 jobs from last year.

Jobs within the craft and trades worker group fell by 139 posts. Of the job contraction in this occupational group, there was a net loss of 34 plumbers, 31 masons and 30 electricians.

International Business Jobs Rise

The number of jobs in the international business sector climbed to 3,937 in 2014. This industry posted 169 additional positions from the previous year. Occupations such as underwriters (+50), actuaries (+22) and investment officers (+10) fueled the increase in the number of jobs filled for this sector.

Employers in the construction and financial intermediation sectors reported significant job losses. Financial intermediation posted a 12 per cent decline in the total number of filled positions. Between 2013 and 2014 this sector fell by 306 jobs. The bulk of the losses were recorded in clerical positions within this sector. The construction industry recorded a net loss of 218 jobs in 2014. The industry reported 1,925 filled positions during the reporting period. This is the lowest level of employment for this sector since 1996 when the job total stood at 1,917 jobs.

Considerable job losses were also reported in business services and the transport and communications sector. Establishments that provide accounting, legal and business consultancy services reported a net loss of 98 jobs in 2014. Jobs in the transport and communication industry fell by 93 positions from 2013.

Employment Income Rises

Table 2 presents the median gross annual income for establishments with more than 10 employees by sex, age, Bermudian status and race. The table also outlines estimates of median annual income by the major divisions of economic activity and the major occupational groups.

Employment income includes all forms of monetary compensation received by employees and self-employed persons before voluntary and mandatory payroll deductions. Only companies with ten or more employees are required to provide income data on behalf of their employees. Median gross annual income is the level of annual income that half of all job holders earn more than and the other half earn less than.

The 2014 median gross annual income earned by job holders in establishments with ten or more employees stood at \$63,897. This level of income represented a 5% increase in earnings compared to the 2013 median income of \$60,668 and outstripped the annual inflation rate in August 2014 of 2.1%. The profile of median annual income by sex shows that the earnings gap between females and males held steady. On average, in 2014 women earned \$65,213 compared to \$62,584 for men.

Seniors in the Job Market

Nearly 7% of the job market consists of seniors who have reached the traditional age of retirement of 65 years. Employers and self-employed persons reported that 2,223

jobs out of 33,475 were held by persons 65 years and over. Table 4 presents the distribution of seniors in the job market by sex, Bermudian status, race, industry and occupation. By sex, men accounted for the larger share of seniors in the job market with 1,196 jobs or 54% while women held 1,027 positions or 46%. Bermudians accounted for an 87% share of job holders who were beyond 64 years with 1,927 jobs. The remaining 296 jobs were almost split evenly among guest workers, non-Bermudian spouses of Bermudians and PRC holders. Blacks filled 59% or 1,307 of the jobs held by persons over 64 years while whites accounted for 761 jobs, or 34%.

The absolute and percent distribution of jobs held by seniors by sex, Bermudian status and race within the major occupational groups is presented in Table 5.

There is significant disparity in the occupational distribution among blacks and whites. This is largely the result of racial segregationist policies prior to the 1970's which afforded whites more educational and employment opportunities than blacks. While the highest proportion of black seniors worked in service, shop and sales (29%) and as plant, machine operators and assemblers (16%), white seniors tended to fill senior official and managerial roles (34%), professional jobs (15%) and clerical roles (14%).
